Refreshments throughout the day
Sale Starts: 1pm**

Auction Selling Agents:

Nutrien Stud Stock with Nutrien Wilson Russ Warren.

A 5% rebate is offered to outside agents who attend the sale and introduce new buyers by 9am on auction day and settle on their behalf within 7 days of purchase. A 1% rebate is offered to agents who attend the sale and settle an auction ram purchase invoice on behalf of a client withing 7 days of sale.

Welcome

Welcome to Haddon Rig's 41st On-Property Auction. We're incredibly excited to be offering this line-up of rams, believing it to be our best group to date. The consistency and quality right through to the end is something we're really proud of as we know clients will pick up value throughout the lineup.

It is a rewarding journey to be on when the results of our extensive AI program, genetic investments and broader breeding plan really shine through. Our poll ewe base is now 3500 strong, allowing us to apply selection pressure in our breeding direction – soft, white wool, early-maturity, strong carcass and welfare traits. Stuart Murdoch and Andy Maclean have done an amazing job with the HR team ensuring every animal presented is structurally sound, with wool, growth and body type we can proudly stand behind.

We've been really pleased to see the meat market turnaround in the last 12 months, and we are confident these conditions will hold over the next 12-24 months with an even stronger rebound expected at the end of 2025.

We want to thank all clients, new and existing for your continued support. As always, the best part of our job is seeing the satisfaction and success of your businesses, and we really appreciate the opportunity to be part of your business' growth.

Kind regards,
Liv Falkiner

The following are based on the 2024 Auction Group averages:

WOOL

As expected, HR continues to vastly outperform our competitors for both Yearling Clean Fleece Weight (YCFW) and Adult Clean Fleece Weight (ACFW), reflecting the ability of HR stud to cut large amounts of wool both early on (as yearlings) and throughout their lifetimes (as adults).

EARLY-MATURITY

Superior growth rates reflect the ability of the HR stud progeny to get to weight quickly, both when they are weaned to when they are 1 year old. Lambs of these rams will reach heavier weights at younger ages, enabling them to be marketed sooner (at the same weight) or be marketed at heavier weights (at the same age) compared with low growth lambs.

WELFARE

As we continue to finetune our ASBVs and improve our accuracies, a core focus continues to be improving the fly strike resistance scores of the sheep i.e. Early Breech Cover (EBCOV) and Early Breech Wrinkle (EBWR).

At the same time, we're carefully increasing the selection pressure on condition scores (Yearling Eye Muscle Depth and Yearling Fat) to improve whole body energy and drought resilience without losing the wool type and correctness our sheep are known for.

UNDERSTANDING AUSTRALIAN SHEEP BREEDING VALUES (ASBVs)

(Sheepgenetics.org)

An Australian Sheep Breeding Value (ASBV) is an estimate of the genetic potential a sheep will pass on to its progeny. ASBVs are designed to be used in conjunction with visual selection methods to select sheep that match your breeding objectives.

Yearling Fibre Diameter (YFD):

Fibre diameter ASBVs are quoted in microns and are expressed as the deviation from the average of animals in the database. The more negative the number the finer the animal. An ASBV of -1.6 means the animal will produce wool that is 1.6 micron finer than the average. A ram with an ASBV for FD of -1.6 will pass half of this benefit onto his lambs, that is -0.8.

Yearling Clean Fleece Weight (YCFW):

A positive Fleece Weight ASBV means a genetically heavier cutting animal. Fleece weight ASBVs are quoted in percentages. ASBVs are deviations from the average of the animals in the database. An ASBV of 20% means the animal will cut 20% more wool than the average. A ram with an ASBV of +20% will pass half of this benefit onto his lambs, that is +10%.

Post Weaning Weight (PWT):

Weights are measured in kilograms and ASBVs are quoted in kilograms. ASBVs are deviations from the average of animals in the database. So an animal with a PWT ASBV of +6kg will be genetically 6kg heavier at post weaning weight than the average. A ram with a PWT ASBV of +6kg will pass half of this benefit onto his lambs, that is +3kg.

Yearling Weight (YWT):

Weights are measured in kilograms and ASBVs are quoted in kilograms. ASBVs are deviations from the average of animals in the database. So an animal with a YWT ASBV of +6kg will pass half of this benefit onto his lambs, that is +3kg.

Yearling Eye Muscle Depth (YEMD):

Muscling ASBVs are measured and quoted in millimetres. They are deviations from the average of animals in the database. So an animal with an EMD of +1.2 will genetically have an eye muscle 1.2mm deeper than the average. A ram with an ASBV of +1.2mm for EMO will pass half of this benefit onto his lamb, that is +0.6mm.

Yearling Fat (YFAT):

Fatness ASBVs are measured and quoted in millimetres. They are deviations from the average of animals in the database. An animal with a FAT of +0.6 will genetically have 0.6mm more subcutaneous fat than the average. A ram with an ASBV of +0.6 for FAT will pass half of this benefit onto his lambs, that is +0.3mm.

INDEXES

An index ranks animals for their suitability to a particular production or breeding objective. It is created by combining multiple individual traits together, in relation to their relative economic contribution.

Wool Production (WP):

The Wool Production index is based on a production system with a strong focus on wool production and quality. The index focuses on genetic improvement of fleece weight, fibre diameter, staple strength and reproduction. Emphasis on lower wrinkle is also included. Selection on the WP index will increase your flock's reproductive performance and reduce breech wrinkle. This is particularly beneficial in flocks looking to produce more lambs and more kilograms of fleece per animal.

Sustainable Merino (SM)

The Sustainable Merino index is based on a production system where the income from sheep meat production and wool clip are reasonably balanced. The index focuses on genetic improvement of fleece weight, growth, lean meat yield and reproduction. Emphasis on reduced wrinkle, dag and worm egg count is also included. This is particularly beneficial in flocks operating in high rainfall areas, or with a strong focus on improving welfare traits, whilst producing large volumes of lamb and wool.
